

## **SECTION VI: PLAN MANAGEMENT**

Fire and land management agencies and private landowners responsible for managing the vegetation in and surrounding the Priority Communities within San Luis Obispo County are encouraged to submit projects that provide for wildfire protection and reduce wildfire risk. The Pre-Fire Projects identified in Appendix A presents a current list of projects, as of the date of this Plan. CAL FIRE/SLO, along with local agency and community input, shall assess project progress annually and invite agencies, landowners, and involved citizens to submit projects that provide for community protection from wildfire. Project identification and implementation is an on-going process and additional projects will be presented annually in a supplement to be prepared by CAL FIRE/SLO.

This Plan is intended to be a living document and has been created to allow for ongoing management, updates, and community input intended for reducing the risk associated with wildland fires in San Luis Obispo. The following sections discuss long-term management objectives intended to promote Firewise communities in the County.

This Plan should be updated by CAL FIRE/SLO, with input from the community and local fire and land management agencies, at least every 5 years, or more frequently, as necessary. Annual updates should be completed via a supplement. The supplement shall summarize changes in the County that affect pre-fire planning and shall provide an updated pre-fire project list (Appendix A) identifying projects completed, in-process project status, and newly-identified or planned projects.

Plan updates shall be conducted following update meetings which will be open to the public and all local fire and land management agencies. Meetings will include a discussion of the following: priorities, budgets, action items and necessary Plan modifications. Participating agencies will report on their respective projects, as necessary. Maintenance of the Plan will be described in detail during these meetings. Additionally, Plan updates shall also include updates to GIS data and mapping and a re-valuation of the County risk assessment and project priorities.
