

FRESNO-KINGS PRE-FIRE MANAGEMENT PLAN

Appendix B

ADMINISTRATIVE PROCEDURES MANUAL

7100- FIRE PROTECTION PLAN "FIRE PLAN"

- General

To meet the objectives of the California Fire Plan, fire incident locations and fire perimeters must be collected in a format that is compatible with Geographic Information System (GIS) based software. The following procedures will apply for the collection of all SRA vegetation fire data year-round.

The Incident Commander is responsible for the following documentation:

- For all SRA vegetation fires less than ten (10) acres, provide the latitude and Longitude (Waypoint) of the fire origin.
 - Utilizing a handheld GPS unit, determine the Latitude and Longitude of the origin and E-mail it to the Prefire Engineer at Sanger Headquarters. Include the incident name, incident number, fire number, date, and cause for each fire.
- For all SRA vegetation fires ten (10) acres or larger, provide a fire perimeter (Track File) and fire origin location (Waypoint) in latitude and Longitude.
 - Utilizing a handheld GPS unit, determine the Latitude and Longitude of the origin and fire perimeter, and E-mail the information to Prefire Engineer at Sanger Headquarters. Include the Incident name, Incident number, fire number, date, and cause for each fire.

Latitude and Longitude Format:

Degrees Decimal Minute Example (36° 05.800' N 120° 31.521' W)

GPS Datum Setting: WGS 84

For additional information or training on how to collect fire data with the GPS unit and mapping software, contact the Prefire Engineer at Sanger Headquarters.
